

## The Hi-Lo Birth Support

The Hi-Lo Birth Support System was designed by Margaret Jowett, author of "Dynamic Positions in Birth". It takes the focus away from the bed, while its compact size ensures that it can fit into all rooms alongside the obstetric bed and other equipment. It provides women with multiple options for positions and movement, and easy access for midwives for observations, working alongside the existing obstetric equipment in case of emergencies. This is a superb way to support active birth, no matter the space limitations, and can be used in unit supporting the highest risk women as it takes up such a small space.

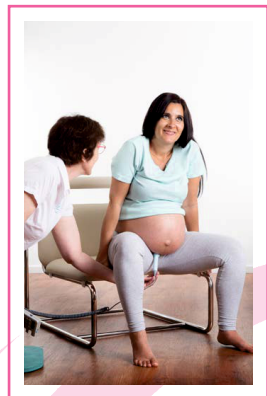

### Footprint:

900 x 700 or 700 x 700 mm

(note that The Osborne can be placed in several ways, each of which change the footprint size – see photos)

The Chair can be placed on the ground in a number of ways, supporting various kneeling, standing and seated forward-leaning positions, and is wide enough to support vaginal breech births.

### Features:

- Designed to strict hygiene standards for Infection Control
- Antimicrobial vinyl easy-clean cover in multiple colour options
- Strong, durable and safe marine-grade stainless steel construction
- Supports multiple labour and birth positions
- Encourages active birth
- Very comfortable even during long labours
- And ideal accompaniment to all obstetric rooms where a balance between active birth and immediate access to obstetric beds is required
- Small footprint – fits all obstetric rooms
- Hugely valuable in "low risk" as well as "high risk" areas to support active birth
